

Checklist of the Collembola:

Pictorial key to common surface dwelling species of Collembola from Jersey, UK

This key is still under construction. Note that missing figures will be provided as soon as possible. Currently, the key is in the feasibility study phase to find out how to integrate in the checklist in a modular way a key that has been generated with **DELTA**.

Frans Janssens, Department of Biology, University of Antwerp, Antwerp, B-2020, Belgium
Tim Ransom, ..., UK

Preamble

This experimental and macrophotographically illustrated key is intended to key out the most common species from Jersey, Channel Islands, UK, based on habitus inspection of alive specimens in the field using at most a magnification of 5x.

All illustrations courtesy of Tim Ransom.

Endnotes

¹ Undescribed subspecies with distinct middorsal thoracic markings.

Differential diagnoses

Dicyrtomina minuta

Body subglobular. Body colour patchy brownish or yellowish. Dorsal thoracic markings absent (fig.22).

Dicyrtomina saundersi

Body subglobular. Body colour patchy brownish or yellowish. Dorsal thoracic markings present (fig.23).

Entomobrya albocincta

Abdomen with distinct and broad black or pale transverse band. Abdominal pale band preceeded by thoracic pale band (fig.7). Body elongate. Body colour not uniform. Third antennal segment subequal

to other antennal segments.

Entomobrya intermedia

Abdomen without broad transversal black band. Body elongate. Body colour not uniform. Posterior dorsal markings u-shaped. Third antennal segment subequal to other antennal segments. Thorax middorsally unmarked (fig.14). U-shaped markings discontinuous (fig.12).

Entomobrya intermedia¹

Abdomen without broad transversal black band. Body elongate. Body colour not uniform. Posterior dorsal markings u-shaped. Third antennal segment subequal to other antennal segments. Thorax middorsally marked (fig.13). U-shaped markings discontinuous (fig.12).

Entomobrya juvenile

Body elongate. Body colour distinct. Body colour uniform. Body colour pale yellowish (fig.15). Third antennal segment subequal to other antennal segments.

Entomobrya multifasciata

Abdomen without broad transversal black band. Body elongate. Body colour not uniform. Posterior dorsal markings not u-shaped. Third antennal segment subequal to other antennal segments. Thoracic markings transversal (fig.8).

Entomobrya nivalis

Abdomen without broad transversal black band. Body elongate. Body colour not uniform. Posterior dorsal markings u-shaped. Third antennal segment subequal to other antennal segments. U-shaped markings continuous (fig.11).

Heteromurus nitidus

Body elongate. Body colour whitish. Body colour uniform. Legs and antennae long (fig.19). Third antennal segment subequal to other antennal segments.

Isotoma caerulea

Antennae long (fig.17). Body elongate. Body bluish. Body colour distinct. Body colour uniform. Body colour intense. Third antennal segment subequal to other antennal segments.

Isotoma viridis

Body elongate. Body greenish (fig.16). Body colour distinct. Body colour uniform. Body colour intense. Third antennal segment subequal to other antennal segments.

Lepidocyrtus cyaneus

Antennae short (fig.18). Body elongate. Body bluish. Body colour distinct. Body colour uniform. Body colour intense. Third antennal segment subequal to other antennal segments.

Onychiuridae

Body elongate. Body colour whitish. Body colour uniform. Legs and antennae short (fig.20). Third antennal segment subequal to other antennal segments.

Orchesella cincta

Abdomen with distinct and broad black or pale transverse band. Abdominal band not preceeded by thoracic one (fig.6). Body elongate. Body colour not uniform. Third antennal segment subequal to other antennal segments.

Orchesella quinquefasciata

Abdomen without broad transversal black band. Body elongate. Body colour not uniform. Lateral longitudinal markings on thoracic and first abdominal segments (fig.9). Posterior dorsal markings not u-shaped. Third antennal segment subequal to other antennal segments. Thoracic markings longitudinal.

Orchesella villosa

Abdomen without broad transversal black band. Body elongate. Body colour not uniform. Lateral longitudinal markings only on thoracic segments (fig.10). Posterior dorsal markings not u-shaped. Third antennal segment subequal to other antennal segments. Thoracic markings longitudinal.

Pogonognathellus flavescens

Antennae shorter than body (fig.5). Body elongate. Third antennal segment much longer than other antennal segments. Third antennal segment tapering apically (fig.1b).

Pogonognathellus longicornis

Antennae longer than body (fig.4). Body elongate. Third antennal segment much longer than other antennal segments. Third antennal segment tapering apically (fig.1b).

Sminthurus viridis

Body subglobular. Body colour uniform green (fig.21).

Tomocerus minor

Body elongate. Body colour uniform (fig.2). Third antennal segment much longer than other antennal segments. Third antennal segment subcylindrical (fig.1a).

Tomocerus vulgaris

Body elongate. Body colour with distinctly more pale transversal bands (fig.3). Third antennal segment much longer than other antennal segments. Third antennal segment subcylindrical (fig.1a).
